

Bring the right details.

A practical checklist for your first waterproofing project conversation.

01 Your project

Project name, location, building type, stage of construction and target timeline. Include the best contact person and their role.

02 The application area

Basement, foundation, roof, terrace, wet area or complete structure. Note approximate area, access conditions and the surface or substrate involved.

03 The present condition

Describe any visible leakage, dampness or cracks. Note previous repairs or existing coatings. Share clear, relevant site photos through your chosen communication channel.

04 What you need to confirm

Ask about product suitability, current availability, substrate preparation, detailing, approved installation guidance, coverage, packaging and required technical documentation.

05 The next conversation

Share the checklist with your project team and EonTera. Final selection should follow an assessment of the actual application and site conditions.

This is a project briefing checklist, not an installation method or engineering assessment. Do not send unrelated personal information or confidential project material without authorisation.
